

FM Interface and “Preconstruction” Reports

The Reports generated by “Preconstruction” are most significant to various sections and office within the Department. Some of the offices will need the data to reference in specific reports for their offices; some individuals have specific duties that require “Preconstruction” data be reviewed; some reports are specifically used by “Preconstruction” users to double-check their entries to insure everything has been entered correctly into “Preconstruction.” Whatever the reason, it will be helpful to know:

1. What reports are available that use “Preconstruction” data?
2. Where are reports and processes accessed?
3. What reports and processes are available?
4. What about the FM Interface?

A. What Reports are Available in “Preconstruction”?

Reports can be generated from the **ACTIONS** menu on Overview and Summary Component headers. It stands to reason the where the report is access, say a Proposal Summary Overview component, will concentrate on dealing with proposals. Don’t try to run a “Project Detail Summary” from a Proposal Summary page, for example. Since component access is needed to run some reports, role access of the component is also essential. This type of security is required since some web Trns*port is highly critical and sensitive. Who is able to access is strictly controlled.

B. Where are Reports and Processes Accessed?

So, let’s get started and see what’s available. There are basically two different processes that will enable access to the various reports and processes that reference “Preconstruction” data. One process is done inside “Preconstruction” and the other is achieved by using the WebGate site. At this point, let’s make sure the difference between reports and processes is clear and then examine how to access reports or processes either within “Preconstruction” or outside of “Preconstruction.”

Before we get ahead of ourselves, let’s take a moment to discuss the difference between a “report” and a “process.” All of the Department’s **custom** reports are called processes in web-Preconstruction. There, does that make the distinction a little easier?

Now that that has been cleared up, where do you go to access reports and processes? Basically reports and processes can be accessed from within “Preconstruction” and outside of “Preconstruction” using “WebGate.” In the old client/server, system, accessing these operations required that the user log into WebGate, an applications outside the T*P system. Now, most of these reports and processes are accessed directly from within web-Preconstruction. It’s like one-stop-shopping! It’s simple, fast and convenient.

REPORTS AVAILABLE WITHIN “Preconstruction:”

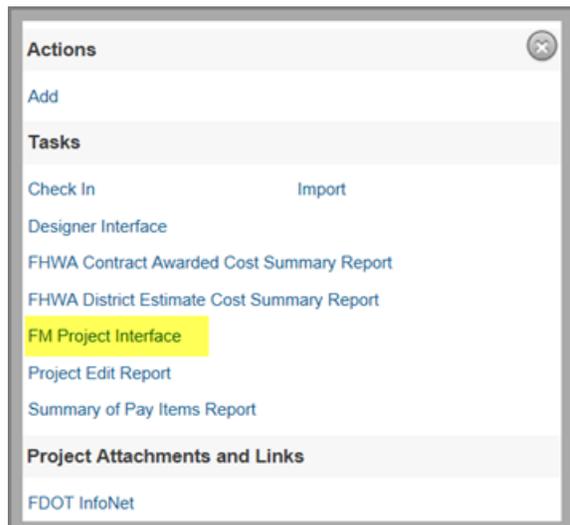

Inside web-Preconstruction, to view a list of available reports, click on the **ACTIONS** button to activate a window listing actions, tasks, reports and other activities that can be executed by clicking on the hyperlinks. Don’t forget there are two different types of ACTIONS buttons: Global Action buttons and Component Action buttons.

Global Action Buttons are accessed by clicking the ACTIONS button at the upper right hand side of every “Preconstruction” page. There are slight differences between the options available when a Global Actions button is used rather than a Component Actions button.

A Global Actions button:

And Results:

Component Actions Button:

And Results:

REPORTS AVAILABLE USING web-Preconstruction:

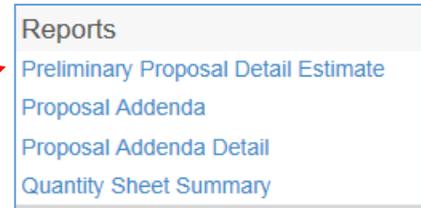

From **Project** Component Actions button:

2. [Final Proposal Detail Summary](#)

From **Proposal** Component Actions button:

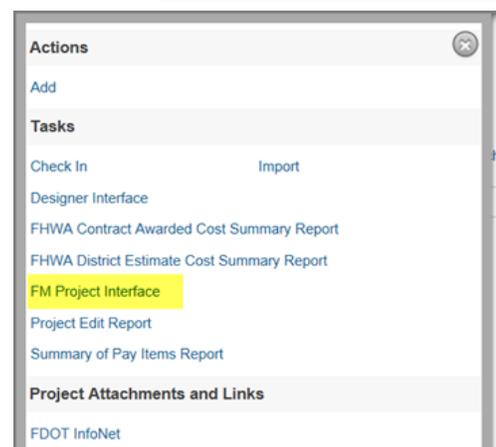

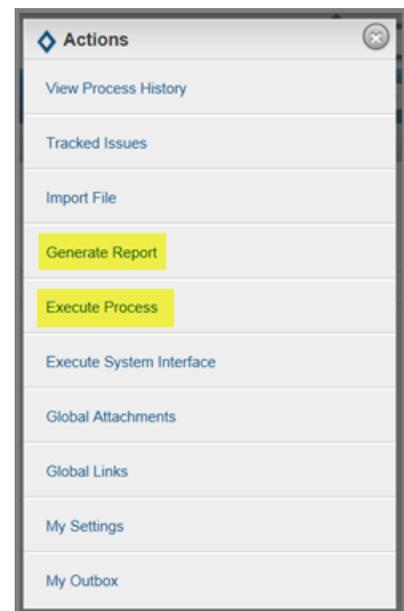

1. [Preliminary Proposal Detail Estimate](#)
2. [Proposal Addenda](#)
3. [Proposal Addenda Detail](#)
4. [Quantity Sheet Summary](#)

C. Reports and Processes

Reports and Processes can both be accessed from web-Preconstruction. Like everything else in web-Preconstruction, what can be accessed is contingent on the user's role. To navigate to reports or processes hyperlinks, go to one of the two different types of ACTIONS button. Since both locations implement hyperlinks to help with navigation, it makes little difference where you go to get to the link you need to access the report. It's helpful to keep in mind that reports and processes are normally the same but in "Preconstruction," custom reports are called "processes."

1. Click the Global **ACTIONS** button or an ACTIONS button from an Overview page. Notice reports can be generated or processes can be executed. When the "Generate Reports" is clicked, a list of available reports displays. When the "Execute Process" is clicked, a process, like "FM Interface," can be activated.
2. This sample below displays the options that might be available from the right side of a record, say the Proposal ID record. Notice the "FM Interface" process is again available.

3. Click on the desired option. In this exercise, the FM Project Interface is highlighted and we're going to run an FM Interface on a specific project.

D. Reports and Processes Accessed from WebGate

Just as there are subtle differences between reports and processes accessed from the Global Actions button and the Component Actions button, there are differences between accessing reports and processes within web-Preconstruction and the WebGate site. The difference is who can run them. It needs to be noted that the end results are the same, whether pulled from the application or from the website.

All of the reports and processes previously available in client/server T*P or the older WebGate site are still available. Since we have quickly gone through a quick overview of how to access reports and processes in "Preconstruction," let's look at the steps needed to access WebGate reports and processes from "Preconstruction."

To access this site, use the site address below:

<https://codev1.dot.state.fl.us/wTWebgateReports/Login.aspx>

It should look exactly like the graphic below:

WARNING: TEST Environment!!! UNIT Test

Logging into WebGate is very simple. Enter the mainframe userid without any capital letters. The password is the same that is used to gain access in the FDOT Mainframe used in combination with the RACF User ID. After successfully logging in, the WebGate Reporting Start Page opens. Click on the desired report to begin the process. Remember, this is the WebGate web site but the reports available from this site are exactly the same as those accessed and run in "Preconstruction." As a matter of fact, some of the reports that are selected in "Preconstruction" are linked to this site. So, don't be surprised if you end up on this page, after clicking on a link in "Preconstruction." The **FM Interface** option is one case in point. The only difference between the new web reports available in "Preconstruction" or WebGate and the client server versions are the appearance or format of the actual report. The data is still coming from the same database and the same tables that were used in the mainframe reports.

A good example is the FM Project Interface. So, let's go through the steps and actually produce one.

1. Start by clicking on the FM Interface section located on the left hand side of the page below. The hyperlink will open for the FM Interface.

2. The FM Project Interface window below will open. Enter the data requested regarding the project. Fields with asterisks (*) must be completed. Once all of the data has been entered, click **SUBMIT** to run the process.

The screenshot shows the 'FM Project Interface' window. The header includes the FDOT logo and the user name 'Carole Heide' with links for 'Help' and 'Logout'. The main content area displays 'FM Project Interface' and 'Admin Functions'. A left-hand navigation menu lists various report categories, with 'FM Project Interface' selected. The main content area contains a form for entering project information, including a 'Project' field, a 'Project Processing List' table, and buttons for 'Submit', 'Reset', and 'Job Output Retrieval'. The form includes instructions: 'This process will add or update projects in Web Tmsport based on data from the Work Program(WPG) system. A background job is submitted that will process all project numbers listed in the Project Processing List displayed below. Click "Job Output Retrieval" link to view all submitted background jobs. Project numbers may be entered into processing list using this page or may be passed in from the Web Tmsport application PROJECT selections. Click the "Enter" button to the right of the project to add it to the Project Processing List. To remove projects from the list, highlight the projects in the processing list and click the "Remove Project From List" button. To process the project numbers in the list, click the "Submit" button.' The form also includes a 'Select/Enter Parameter Information: Required fields marked with asterisk(*)' section with a 'Project' field and 'Enter' and 'Clear' buttons. Below this is a 'Project Processing List' table with columns for '* Projects: (Up to 50 Maximum)' and 'Number of Projects in the list: 0'. The table is currently empty. Below the table are buttons for 'Remove Project from List', 'Submit', and 'Reset', and a link for 'Job Output Retrieval'.

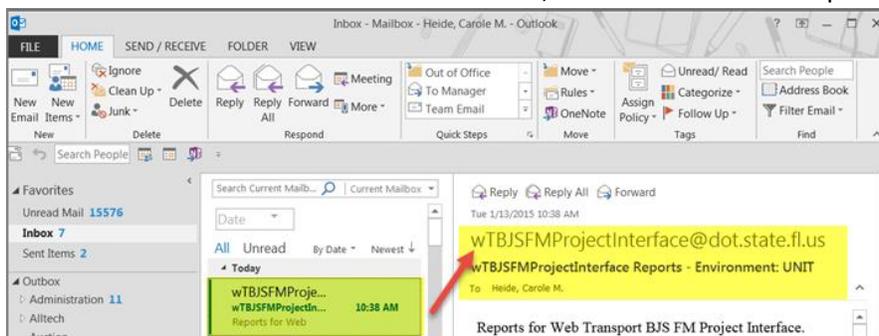

3. To retrieve the results, complete the required data for either the FDOT User Sign-in Portal with the FDOT Network data:

The screenshot shows the 'FDOT User Sign-in Portal'. The page features a 'FDOT Network' section with a link for 'RACF / Mainframe' and a 'Login' section with input fields for 'Network Id*' and 'Password*', and a 'Login' button. A note at the bottom states '* indicates required entry.'.

4. or the Racf ID/Mainframe data:

5. A couple of “caveats” are needed at this point.
- Click **ENTER** to transfer the project ID from the original entry box to the Project Processing List.
 - When a project ID is not entered corrected or is unnecessary, it can be removed by clicking **CLEAR**.
 - More than one project id can be entered before running the FM Interface process.
 - Click **SUBMIT** to execute the system process.
 - Click **RESET** to remove all of the projects and start anew.
 - The Job Output Retrieval button can be clicked to access the report.

6. An email notice will be delivered to the user via Outlook.
7. Check the INBOX for the notice. When it arrives, click on the notice to open and read.

Executed Contracts

Parameters:

This report lists all proposals in the status of "3-Executed" in 2 reporting sections: Federal Aid contracts and Non-Federal Aid contracts. Report includes proposal number, lead FPN number, federal aid number, awarded contractor, surety company, contract amount, executed date, letting date, SiteManager contract number, and SiteManager notice to proceed (NTP) date. To run the report enter an executed date range, and select a district.

Select/Enter Parameter Information: Required fields marked with asterisk(*)

	Florida Department of Transportation web Trnsport Unbalanced Items	3/25/2015 12:54:55 PM
<hr/> <u>NOTICE - CONFIDENTIAL INFORMATION - NOT TO BE DISCLOSED</u> <hr/>		
<p>ANY INFORMATION related to the Department's official estimate is CONFIDENTIAL until the project is executed, per Florida Statutes 337.168, which reads as follows:</p>		
<p>337.168 Confidentiality of official estimate, identities of potential bidders, and bid analysis and monitoring system.</p>		
<p>(1) A document or electronic file revealing the Department's official cost estimate of a project is confidential and exempt from the provisions of S.119.07(1) until the contract for the project has been executed or until the project is no longer under active consideration.</p>		
<p>(2) A document revealing the identity of persons who have requested or obtained bid packages, plans, or specifications pertaining to any project to be let by the department is confidential and exempt from the provisions of S.119.07(1) for the period which begins two (2) working days prior to the deadline for obtaining bid packages, plans, or specifications and ends with the letting of the bid.</p>		
<p>(3) The bid analysis and monitoring system of the department is confidential and exempt from the provisions of S.119.07(1). This exemption applies to all system documentation, input, computer processes and programs, electronic data files, and output, but does not apply to the actual source documents unless otherwise exempted under other provisions of law.</p>

Avg. Bid Amount		\$50,000.00		
Total Avg. Bid Amount		\$5,651,801.41		
<p>Note: The Unit Price Bid Avg. is obtained by first averaging all bids and the estimate. From this average all bids are removed which are either less than 45% of the average or more than 145% of the average. If there are no bids left, then the percentages are changed to 10% and 190%, then finally to 0% and 200%. AVG2 is the average of the bids that are left.</p> <p>Bids are flagged as 'U' for Unbalanced when their bid is less than 40% of the Unit Price Bid Avg. They are flagged as 'A' for Above Tolerance when their bid is greater than 160% of the Unit Price Bid Avg. If they meet this condition and they are listed as a possible Front Load item, then they are flagged as 'F' for Front Load. The Avg. Bid Amount is the Unit Price Bid Avg. multiplied by the estimated quantity of the item. The Total Avg. Bid Amount is the sum of Avg. Bid Amounts for a contract.</p>				

Withdrawn Reject Cancelled NoBids Report:

5 Page Report

Parameters:

This report lists all letting proposals in the status of "04-bids rejected", "05-withdrawn", "06-award cancelled", "07-execute cancelled", and "08-no bids received". Report includes proposal number, letting date, status, status date and number of bidders. To run the report, enter a proposal status date range and select a district.

Select/Enter Parameter Information: Required fields marked with asterisk(*)

* Proposal Status:

Begin Date:

* Proposal Status End Date:

* Letting District: **All Districts**
