

Roadside Barriers

Roadside Barriers

Course Outline:

Part 1 – Research Results

***Part 2 - Roadway Departure
Technology Transfer***

Part 1 Research Results W-beam Guardrail

In-Service Performance Evaluation of G4 (1S) Strong-Post W-beam Guardrail

Researchers:

Dr. Priyanka Alluri, Research Associate

Dr. Albert Gan, Professor

Dr. Kirolos Haleem, Research Associate

Florida International University

Research Project Manager:

John Mauthner, P.E., Roadway Design Office

Florida Department of Transportation

Project Objectives

Volume I: W-beam Guardrail

- ◆ Conduct an ISPE of median and roadside G4 (1S) Strong-post W-beam Guardrail Systems for both Limited Access and Non-limited Access Facilities in Florida.
- ◆ Develop a system for the collection and maintenance of guardrail inventory data.

Identification of Study Locations

In total, **685.2** miles of limited access facilities and **341.5** miles of non-limited access facilities were identified as G4 (1S) Strong-post W-beam Guardrail Systems. Additional locations with **rub-rail** were also identified in this study to determine their affect on guardrail performance.

Guardrail without rub-rail
on the Florida Turnpike

Guardrail with rub-rail on I-95

Application Development by:

Dr. Kaiyu Liu of the Lehman Center for Transportation Research,
Florida International University

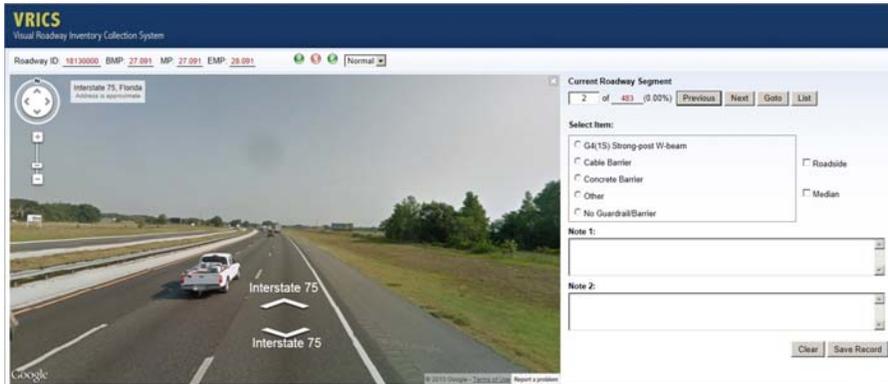

<http://131.94.122.209/VRICS/RdDataReview.aspx>

Visual Roadway Inventory Collection System

Application Used:

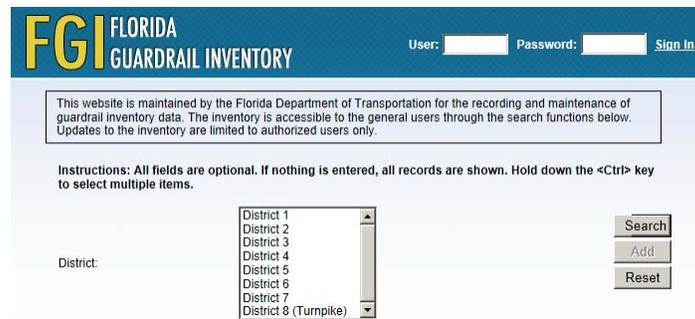

VRICS - Visual Roadway Inventory Collection System

FGI - Florida Guardrail Inventory System

The Florida Guardrail Inventory (FGI) System was developed by Dr. Liu for Maintenance Offices to Record and Maintain Guardrail Inventory Data on all State Road Facilities in Florida.

<http://131.94.122.83/FGI/main.aspx>

Review of Police Reports

- ◆ From 2006-2010, **40,738** crashes were identified and their police reports were reviewed using a web-based application.
- ◆ For guardrail-related crashes, we looked at:
 - ✓ Crash Severity and Vehicle Type
 - ✓ Location of guardrail that was hit (i.e., **roadside or median**)
 - ✓ Whether the vehicle crossed over the guardrail or not (**guardrail crossover crashes**)
 - ✓ Whether the vehicle crossed over the median and went into the opposite direction of travel or not (**median crossover crashes**)
 - ✓ Type of crossover: **under-ride, over-ride, or penetration**

Limited Access Facilities

Limited Access Facilities

Crossover Crash Statistics by Guardrail Placement

Guardrail Placement	Guardrail Crossover Crashes	Guardrail Non-Crossover Crashes	Total Crashes	Percent of Guardrail Non-Crossover Crashes
Median	263	5545	5808	95.5%
Roadside	81	1387	1468	94.5%
Not Sure	0	14	14	100.0%
Total	344	6946	7290	95.3%

Study Data Trend Correlation:

Performance Difference in % of Non-Crossover Crashes
For Guardrail Placed in Medians versus Roadsides
Is Comparable @ $\Delta = 1.0\%$

Crossover Crash Statistics by Vehicle Type

Vehicle Type	Total Guardrail Crossover Crashes	Total Guardrail Non-Crossover Crashes	Total Crashes	Percent of Guardrail Non-Crossover Crashes
Car	133	5104	5237	97.5%
Light Truck	141	1528	1669	91.6%
Medium Truck	20	74	94	78.7%
Heavy Truck	41	135	176	76.7%
Motorcycle	2	23	25	92.0%
Other	5	31	36	86.1%

Study Data Trend Correlation:

Incapacitating (A) Crash Rate of Median Guardrail
For Crossover to Non-Crossover = **3:1**

Guardrail Non-Crossover Crash Percentages at all Median Locations and at Locations with Rub-rail by Severity

Crash Severity	Percent of Guardrail Non-Crossover Crashes	
	All Median Guardrail Locations	Locations with Rub-rail
Fatal (K)	74.0%	78.6%
Incapacitating (A)	89.1%	91.8%
Non-Incapacitating (B)	92.8%	92.9%
Possible (C)	96.9%	96.7%
PDO (O)	97.8%	97.2%
Unknown		
Total		

Study Data Trend Correlation:

By Severity Type
Guardrail with Rub-rail Performed Better than Median Guardrail without Rubrail

Key Findings

- ◆ **97.5%** of cars were prevented from crossing the guardrail.
- ◆ **91.6%** of light trucks were prevented from crossing the guardrail.
- ◆ There is a Statistically Significant Difference in the Performance of Cars versus Light Trucks @ **5.9%**.
- ◆ **Crossovers were more severe compared to non-crossovers.**
- ◆ Among all crossover crashes, **over-rides** were most severe.
- ◆ Locations with **rub-rail** by Severity Type performed some-what better, however, this was based on limited data availability.
- ◆ Additional research is required to determine the affect **Rub-rail** has on the performance of **W-beam Guardrail**.

Non-limited Access Facilities

Non-limited Access Facilities

Crossover Crash Statistics by Guardrail Placement

Guardrail Placement	Guardrail Crossover Crashes	Guardrail Non-Crossover Crashes	Total Guardrail-related Crashes	Percent of Guardrail Non-Crossover Crashes
Median	50	761	811	93.8%

		Median Non-crossover	634	636	99.7%	190	199	95.5%	--	--
Arterial	All Guardrails (Roadside and Median)	Guardrail Non-crossover	904	949	95.3%	291	331	87.9%	4.62	Yes

Part 2 Roadway Departure Technology Transfer

Goals of the Project

Improve Roadway Departure Safety by:

- ◆ Proper design and selection of safety features.
- ◆ Correct installation procedures.
- ◆ Maintaining safety features in a state of constant “readiness.”

Roadway Departure
Technology Transfer

Roadside Safety Systems
Installer Training and
Designer Mentor

Why Florida?

- ◆ Florida is one of **17** FHWA Roadway Departure Focus States.
- ◆ In **2010**, over **20.5** percent of all traffic-related Fatalities were Roadway Departure related.

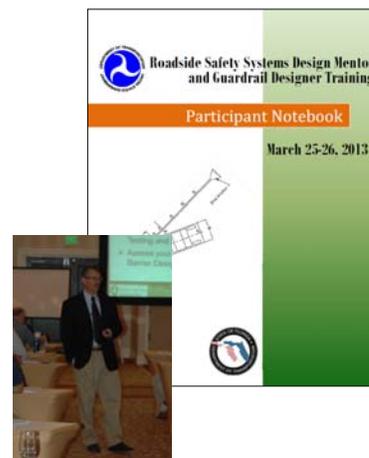

Project Deliverables

Guardrail Designer Training

- Two-day training session
- Target audience included Florida DOT and local transportation agency personnel, Florida Turnpike Enterprise, LTAP, NACE, Florida Association of County Superintendents and consultants with direct responsibilities for specifying and designing roadside barriers, including end terminal, transitions, and crash cushions

Guardrail Designer Training – Day 2 and Guardrail Installer Training – Day 1

Safety Hardware Manufacturers made presentations on products approved to be on our Qualified Products List, and participants were given hands-on familiarity with a variety of safety products.

Temporary Barriers →

Crash Cushions →

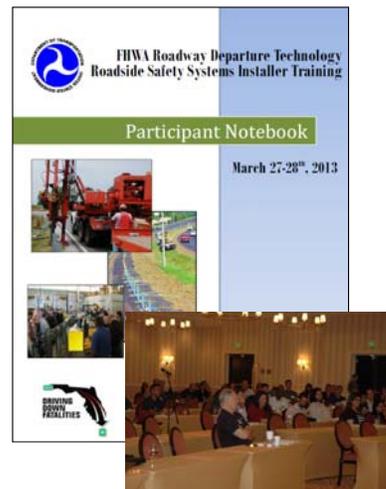

End Terminals →

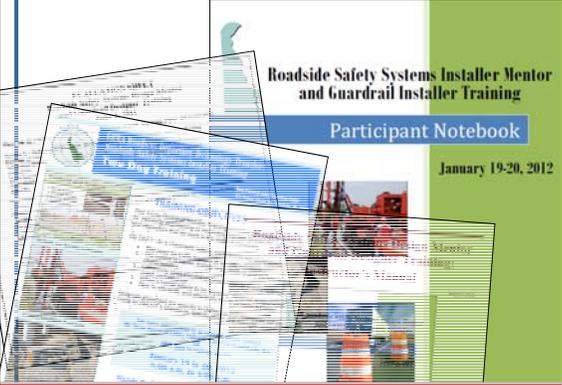

Guardrail Installer Training

- This is a two-day training session
- Target audience includes contractors and inspectors at all level of government with direct responsibilities for installing, maintaining, or inspecting traffic barriers, including end terminals, transitions, and crash cushions.

State Training Tools

Roadside Safety Systems Installer Mentor and Guardrail Installer Training
Participant Notebook
January 19-20, 2012

All materials used to present and facilitate the training has been packaged for the State, so State personnel can conduct their own training on a regular basis.

Roadside Safety Systems Toolkit

Technical Briefs (5)

Purpose

- ◆ Expand knowledge of the state-of-the-practice in Roadside Safety.
- ◆ Provide background, key data and research, and priority recommended practices to improve roadside safety.

Roadway Departure Technical Brief No. 2
Guardrail Installations at Intersections, Side Roads, and Driveways

EXPECTED RESULTS
This document provides information about roadside design practices to determine the effectiveness of current design practices and provide guidance for the selection and placement of guardrails, end use materials, and the site conditions of the proposed road systems. It is intended for use by designers.

DESIGN OBJECTIVES
The primary barrier function of guardrails is to prevent vehicles from leaving the roadway. The primary barrier function of guardrails is to prevent vehicles from leaving the roadway. The primary barrier function of guardrails is to prevent vehicles from leaving the roadway.

DESIGN CONSIDERATIONS
When the design of guardrail systems is completed, it is important to consider the following design considerations: 1. Identify the design of guardrail system and use a crash report as a guide. 2. Identify the design of guardrail system and use a crash report as a guide. 3. Identify the design of guardrail system and use a crash report as a guide.

TECHNICAL BRIEFS

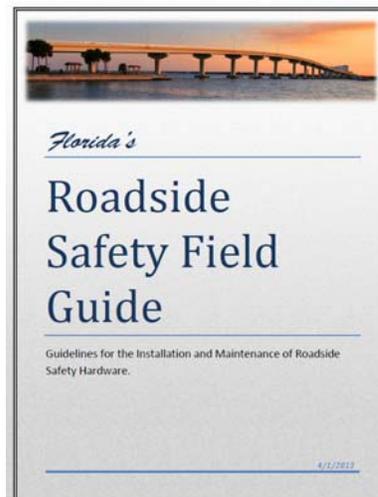

Florida's Technical Brief Topics:

- ◆ Pre-Installation Field Review Check List.
- ◆ Guardrail Installation at Intersections, Side Roads, and Driveways.
- ◆ Roadside Safety System Damage Assessment.
- ◆ The MGS Guardrail System.
- ◆ In-service Evaluation of Roadside Safety Features.

Roadside Safety Field Guide

This is a State specific guide and is designed to be used by all personnel involved in designing, selecting, installing, inspecting, and maintaining roadside safety hardware.

FIELD GUIDE EXAMPLE

- Part 1 – Guardrail Basics
- Part 2 – Special Cases
- Part 3 – End Terminals
- Part 4 – Maintenance

Clear Zone
 The term "clear zone" is used to designate an area bordering the roadway, starting at the edge of the traveled base, which is available for safe use by road users. Such use generally means the slope is flat enough and free of fixed object hazards or a structure bearing the road is able to stop and return to the roadway safely.

The clear zone distances shown below represent minimum recommended distances and are based on traveled base. The best answer to the question "How wide should the clear zone be?" is "As wide as practical in each situation – but at least as wide as the distances shown in the Table below!"

Design Speed (mph)	Travelled and Shoulder	Clear Zone for Reverseable Terrain	
		Greater than 10MADT	Less than 10MADT
More than 47 mph	11		
47 mph	11		

QUADROAD Edge Road
 See Table 10.10.1.1.1, 1.1.2, 1.1.3, 1.1.4, 1.1.5, 1.1.6, 1.1.7, 1.1.8, 1.1.9, 1.1.10, 1.1.11, 1.1.12, 1.1.13, 1.1.14, 1.1.15, 1.1.16, 1.1.17, 1.1.18, 1.1.19, 1.1.20, 1.1.21, 1.1.22, 1.1.23, 1.1.24,
