

# Chrome Browser Users

Chrome has stopped support of older browser plugins. Since the current map used in APLUS is based on Silverlight, you will have issues. The information below is a temporary fix and will be viable until September 2015.

- Open Chrome

- In address bar enter: **chrome://flags**
- Scroll down until you find *Enable NPAPI* and set it to enable.

- Restart your browser and the Silverlight application (APLUS in this case) will open.

FDOT is actively in the process of developing the map interface in HTML 5 which will be compatible with the different browsers.
