**Comment:**

We barely finished our developmental project using 15% RAP in the friction course and we are already increasing the allowable amount of RAP to 20%. Are we moving too fast

**Response:**

This is a valid concern. The staff at the SMO do not believe we are moving too fast. We have no plans of raising the limit higher than 20%.

**Comment:**

337-2.1. Update URL to the specifications office website to ensure consistent implementation of specification and list. To be provided by the Specifications Office.

**Response:**

Agreed. Change made.
