**Comment:**

I would only offer that the approved shop drawings be considered as a requirement placed on the QPL like Incidental structures drawings. This in turn would be part of the producer's QCP approval process and give Verification access to the approved drawings for them to inspect by.

**Response :**

The approved QPL drawings for Steel strain poles and Mast arms are listed on the QPL website and available for review. Currently the QPL and QCP processes are separate. The two offices responsible (Specifications and Materials) should address the question of whether it would be prudent to merge the QPL and QCP process together for these type of products.
