Will this change cause the cost of replacing Sidewalk and Driveways to go down since we will be paying the contractor separately for the removal of the existing or will we be paying them twice for the same thing, since currently the cost of removal is built into the cost for new Sidewalk and Driveways?

Response: Theoretically, the bid price for new install would go down because the removal is no longer included in the pay item. The cost of removal is now all in Section 110 and no longer a factor in the cost to build new. See revisions to 520, 521, 522, and 524.

5201201, 5210800, 5221000, 52401000 are proposing to make the removal of existing items fall under the clearing and grubbing pay item which is a "lump sum" item. How will the contractors be compensated when we find over runs to any of these items. The removal of concrete sidewalk, curb and gutter, ditch pavement, etc.. are some of the most overrun items we use. More than not we find additional areas for all of these items that are removed and replaced. Placing the removal under the clearing and grubbing item will create issues with payments. Tracking quantities is not an issue because your removal sy's should match your new sy's (in most cases). Need to leave removal under the cost of the new items.

Response: Sidewalk, curb elements, ditch pavement, and rigid concrete pavement will be measured (SY) and paid based on plan area/projected horizontal plain. Please see Program Management Bulletin 16-06.
