960 POST-TENSIONING COMPONENTS.

(REV 11-2-16) (FA 11-8-16) (7-17)

SUBARTICLE 960-3.2.1 is deleted and the following substituted:

960-3.2.1 Component and System Tests:

Corrugated duct, smooth duct and all associated components that are used for both internal and external PT systems, e.g. couplers, anchorages, inlets, outlets, valves, plugs, etc., shall meet the requirements of fib Technical Report Bulletin 75 titled, "Polymer-Duct Systems for Internal Bonded Post-Tensioning", Performance Level 2 (PL2), with modifications as shown in Table 3.2.1-1.

1. Yes = Test is required; No = Test is not required.

2. Do not preload strand into duct prior to testing.

3. Identify duct as meeting Performance Class I or II criteria.

4. Use an epoxy compound meeting the requirements of Section 926, Type AB.

EXPECTED IMPLEMENTATION JULY 2017

5. Perform tests on the largest assembly and the smallest assembly for each family of PT systems. A family of PT systems is defined a group of PT strand/bar assemblies of various sizes using common anchorage devices and design.

6. For each test, use a PT system assembly consisting of at least one of each component and connection type required to install a tendon from anchorage cap to anchorage cap. For bar tendon systems, use between 15 and 50 feet of duct with a straight profile.
