

Florida Department of Transportation

Standards History

The Florida Department of Transportation (FDOT) printed its first official English version of “*Road Design Standards*” and “*Traffic Operations Standards*” Booklet in 1976 in hard bound paper format. Booklets were published and shipped to our District Offices, Consultants and made publically available through our Maps & Publications Office for a small charge for printing and binding.

The FDOT is always striving to make our information not only available to our customers, but also to be Consistent, Predictable and Repeatable. We achieve this through updating our Standards and Processes to be easier to read, understand and follow and available in a standard PDF format so our Customers can print by; Standard Plans, Index and by primary divisions. Our websites have also been written to be more navigable, making available for download Standard Plans Instructions, Cell data, borderless DGN/DWG data types and all scanned historical versions.

We have included a table of the yearly history which the Standards have gone through since its inception. If you have ideas or suggestions to make our site better or if you need assistance finding information, please contact us at:
