GENERAL NOTES

GENERAL SPECIFICATIONS:
Florida Department of Transportation Standard Specifications for Road and Bridge Construction (dated XXXXXX), as amended by contract documents.

DESIGN SPECIFICATIONS:
FDOT Structures Manual dated [January or July 20XX] (ref. Vol 1, Section 1.6)
Subsequent Structures Temporary Design Bulletins C[XX-XX], C[XX-XX], and C[XX-XX].

ENVIRONMENT:
Superstructure – [Slightly/Moderately/Extremely] Aggressive
Substructure – Concrete: [Slightly/Moderately/Extremely] Aggressive
Steel: [Slightly/Moderately/Extremely] Aggressive

FUTURE WEARING SURFACE:
Design includes allowance for 15 psf.

CONCRETE: [Depends on Environmental Classification]
All concrete shall be in accordance with Section 346.

Concrete Class	Min. 28-day Compressive Strength (ksi)	Location of Concrete in Structure
XX	f'c = XX	CIP Traffic Railing Barrier
XX	f'c = XX	CIP Superstructure
II	f'c = 4.5	CIP Approach Slabs

CONCRETE COVER: [Depends on Environmental Classification]
CIP superstructure = X in. (Typical except as noted)
CIP substructure = X in. for external surfaces cast against earth
= X in. for other external surfaces

Concrete covers shown in the plans do not include placement and fabrication tolerances unless shown as "minimum cover". See FDOT Standard Specifications for allowable tolerances.

REINFORCING STEEL:
All reinforcing steel shall be ASTM A615, Grade 60.

APPLIED FINISH COATING:
A Class 5 Finish Coating shall be applied to the portions of the structures shown on the Surface Finish Detail.

PLAN DIMENSIONS:
All dimensions in these plans are measured in feet either horizontally or vertically unless otherwise noted.

UTILITIES:
For locations of existing utilities, see Plan and Elevation Sheets X-X, X-X, and X-X.

SCREEDING DECK SLABS:
Screed the riding surface of the Bridge Deck and Approach Slabs to achieve the Finish Grade Elevations shown in the Plans. Account for theoretical deflections due to deck self weight, deck casting sequence, deck forming systems, construction loads, overlays and temporary shoring, etc. as required.

STAY IN PLACE DECK FORMS:
Stay in place deck forms will not be permitted on this project.
or
Design includes allowance for 20 psf. over the projected plan area of the metal forms for the unit weight of metal forms and concrete required to fill the form flutes. Stay-in-place metal forms to be detailed to clear top lateral bracing of box girder.

JOINTS IN CONCRETE:
Construction joints will be permitted only at locations indicated on the plans. Additional construction joints or alterations to those shown shall require approval of the Engineer.

DIMENSION VERIFICATION:
The dimensions, elevations and intersection angles shown are based on information as detailed in the Original Construction Plans of the existing bridges (unless noted otherwise), and may not represent the as-built conditions. It is the Contractor's responsibility to verify this data before beginning construction.

TRAFFIC CONTROL PLANS:
[insert specific Traffic Control notes for the project].

CONSTRUCTION OVER TRAFFIC:
The following construction activities shall not be allowed over traffic:
a. Girder placement.
b. Deck form placement and removal.
c. Concrete deck placement.

PHASING OF WORK:
Work phasing and progression of the work shall conform with the Traffic Control Plans located in the Roadway Plans and the notes on the construction sequence drawings.

EXISTING REINFORCING STEEL:
All superstructure deck transverse reinforcing steel, both top and bottom layers, and end bent reinforcing steel shall be protected, salvaged and utilized in the new structure. Cutting of this reinforcing steel and substitution of epoxy bonded dowels is not permitted as a construction option.

LEAD BASED PAINT:
[Use note for all locations where lead based paint has been found]
The Contractor is responsible for following the requirements of the Occupational Safety and Health (OSHA), the Environmental Protection Agency (EPA) and other governing Authorities when removing paint. See the Specifications for additional information.

UTILITIES:
The utilities, including under deck lighting, shown in the bridge plans are at approximate locations. For additional information refer to the utilities plans.

BID ITEM NOTES

1. For Traffic Control Notes, see Roadway Plans.
2. For limits of Removal of Existing Structures, Item Number 110-3, see Sheet No. xx-xx.
3. The Approach Slab sheets are included with the Bridge Plans. All quantities, that are associated with the individual Approach Slabs are included with the quantities for their respective bridges, except for the asphalt overlay quantities. They are included with the Roadway quantities.
4. See additional pay item notes on sheets [Insert Sheet Numbers].

SHEET TITLE: GENERAL NOTES

PROJECT NAME: DETAILING MANUAL EXAMPLES

SHEET NO. EX-1

$USER$ $DATE$ $TIME$ $FILE$

STRUCTURAL STEEL:

All structural steel shall be in accordance with ASTM A709, Grade 50, except that stiffeners, internal and external cross frames and lateral bracing shall be Grade 36 unless otherwise shown.

CHARPY V-NOTCH:

All ASTM A709 structural steel as designated on the plans shall receive Charpy V-Notch testing in accordance with ASTM A709:

a. Redundant members, as designated on the plans, shall be tested in accordance with ASTM A709, Table 9.
b. Non-redundant members, as designated on the plans, shall be tested in accordance with ASTM A709, Table 10.

All other structural steel shall meet the Charpy V-Notch test requirements specified in Specifications Section 962.

STEEL FABRICATION:

Structural steel for girders and girder framing, including box girders, diaphragms, cross bracing, etc., shall be ASTM A709. Fabrication shall be performed in accordance with the current applicable edition of the AASHTO/AWS D1.5 Bridge Welding Code. Fabricators of structural steel girders and girder framing shall have the AISC Quality Certification for Major Steel Bridges and AISC Fracture Critical Members endorsement.

WELDING:

1. Welding details and operations shall be in accordance with the current edition of the AASHTO/AWS D1.5 Bridge Welding Code. Welding procedures shall be submitted and approved prior to welding on the project. Welds requiring non-destructive testing shall be radiographically inspected, except where the geometry of the region of the weld will not permit satisfactory information to be secured for verification of the weld quality. When such geometrical conditions exist, other inspection procedures or combinations of procedures such as Ultrasonic Inspection, Dye Penetrant Inspection and/or Magnetic Particle Inspection, shall be used. Non-destructive Testing shall be performed as required by the current edition of the AASHTO/AWS D1.5 Bridge Welding Code.
2. Field welding to any Structural Steel for the purpose of attaching erection hardware, or for anchoring conduits for box lighting shall not be permitted. Proposed method of anchoring conduits/boxes for box lighting shall be formally submitted to the Engineer for approval. Shear Connector Installation is governed by OSHA Steel Erection Rule.
3. The following members are classified as ancillary members in accordance with the current edition of the AWS D1.5 Bridge Welding Code:
    a. Expansion Joint Welds
    b. Drainage System Welds

FRACTURE CRITICAL MEMBERS:

See framing plans for designation of Fracture Critical Members. Structural components designated on the plans or in the special provisions as "Fracture Critical" shall conform to the provisions of Chapter 12 of the current AASHTO/AWS D1.5 Bridge Welding Code.

FIELD CONNECTIONS:

All field connections shall be made with 7/8" diameter high strength slip critical type bolts in accordance with ASTM A325 unless otherwise shown.

PAINTING:

All structural steel shall be painted with a self-curing inorganic zinc coating system in accordance with Section 561 of the Specifications. A three (3) coat system is required regardless of environmental classifications on the exterior of the box girders and the exterior diaphragms. The finish coat shall conform to Federal Standard No. xxx Color Number xxxx. One (1) shop coat (first coat of a three (3) coat inorganic paint system) is required in the interior of the box girders. Interior of box is to be painted light grey or white.

LADDERS AND PLATFORMS:

Structural steel for ladders and platforms shall conform with ASTM A36 and shall be hot-dip galvanized in accordance with ASTM A123. Welding shall conform to AWS D1.1

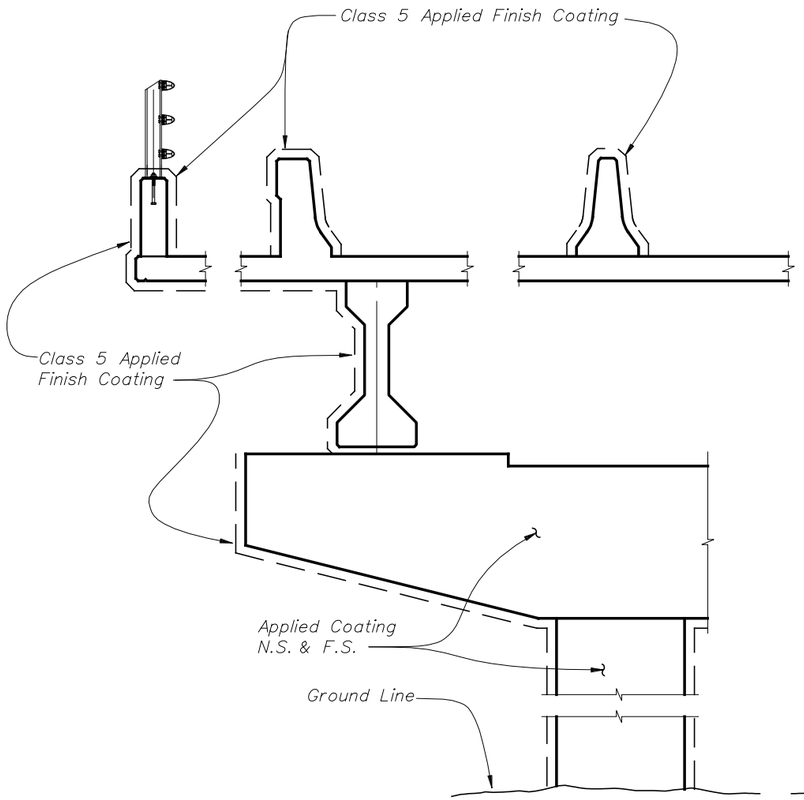
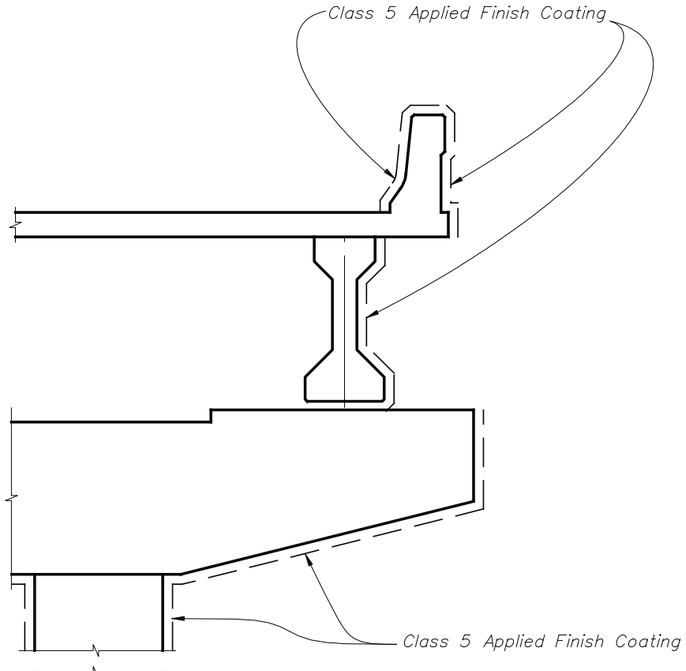
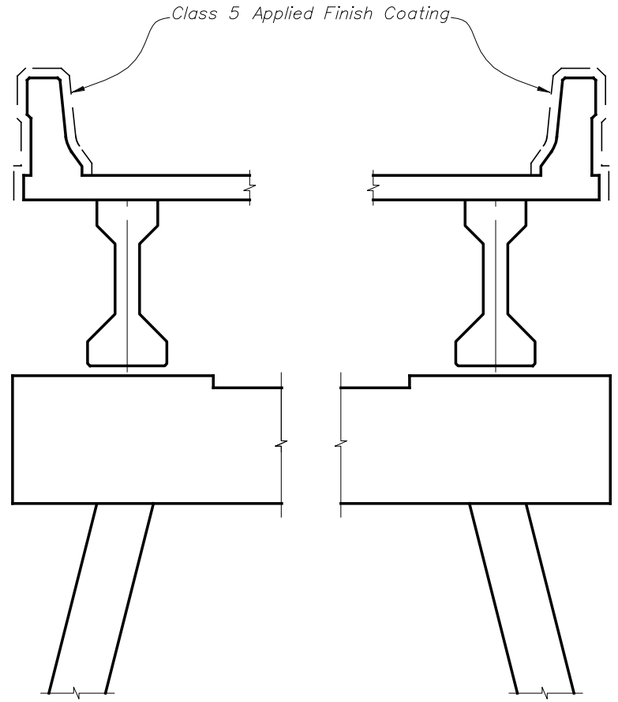
CONCRETE FINISHES



GRADE SEPARATION STRUCTURES





WATERWAY CROSSINGS AND R.R. SEPARATION STRUCTURES

GRADE SEPARATION STRUCTURES:
Apply a Class 5 Finish Coating to all exposed surfaces seen in Elevation, see detail above, as well as exposed surfaces of end bent wingwalls and all exposed surfaces of piers above ground line except tops of caps.

WATERWAY CROSSINGS AND RAILROAD SEPARATION STRUCTURES:
Apply a Class 5 Finish Coating to all exposed surfaces (top, inside and outside) of end bent wing walls, traffic barriers, median barrier and deck slab coping (see detail above).

C.I.P. RETAINING WALLS:
Apply a Class 5 Finish coating to all exposed surfaces of C.I.P. retaining walls (when called for on the plans).

The intent of the notes at left is to coat surfaces seen by the motoring public. Judgement shall be used in determining surfaces to be coated on Waterway and Railroad Structures in urban areas.

DRILLED SHAFT DATA TABLE

INSTALLATION CRITERIA					DESIGN CRITERIA					TESTING
Pier or Bent No.	Shaft Size (in.)	Tip Elev. (ft.)	* Min. Tip Elev. (ft.)	Min. Rock Socket Length (ft.)	Factored Design Load (tons)	Down Drag (tons)	Long term Scour Elev. (ft.)	100-Year Scour Elev. (ft.)	ϕ	** Consider Non-Redundant
1	48	7.00	10.00	12.00	212.00	N/A	27.9	27.9	.55	No
2	48	0.00	16.00	10.00	318.00	N/A	27.9	27.9	.45	Yes
3	48	-13.00	0.00	16.00	318.00	N/A	27.9	27.9	.45	Yes
4	48	-5.00	0.00	7.00	212.00	N/A	27.9	27.9	.55	No

Tip Elevation: The elevation to which the shaft shall be constructed unless test load data, rock cores, or other geotechnical test data obtained during construction allows the Engineer to authorize a different tip elevation.

** Min. Tip Elevation: The highest elevation that the shaft tip may be constructed if adjustments are made to the tip elevation*

*** Inspect all nonredundant drilled shafts using SID or approved alternate down-hole camera to verify shaft bottom cleanliness at the time of concreting. Test all nonredudant drilled shafts using cross-hole-sonic logging (CSL).*

PILE DATA TABLE

	INSTALLATION CRITERIA								DESIGN CRITERIA							PILE CUT-OFF ELEVATIONS								
	PIER or BENT NUMBER	PILE SIZE (In)	NOMINAL BEARING CAPACITY (tons)	TENSION CAPACITY (tons)	MINIMUM TIP ELEVATION (ft)	TEST PILE LENGTH (ft)	REQUIRED JET ELEVATION (ft)	REQUIRED PREFORM ELEVATION (ft)	FACTORED DESIGN LOAD (tons)	DOWN DRAG (tons)	TOTAL SCOUR RESISTANCE (tons)	NET SCOUR RESISTANCE (tons)	100-YEAR SCOUR ELEVATION (ft)	LONG TERM SCOUR ELEVATION (ft)	RESISTANCE FACTOR-Ø	PILE 1	PILE 2	PILE 3	PILE 4	PILE 5	PILE 6	PILE 7	PILE 8	PILE 9
PHASE 1																								
PHASE 2																								

$$\frac{\text{Factored Design Load} + \text{Net Scour} + \text{Down Drag}}{\emptyset} \leq \text{Nominal Bearing Resistance}$$

TENSION CAPACITY – the ultimate side friction capacity that must be obtained below the 100 year scour elevation to resist pullout of the pile (Specify only when design requires tension capacity).

TOTAL SCOUR RESISTANCE – an estimate of the ultimate static side friction resistance provided by the scourable soil.

NET SCOUR RESISTANCE – an estimate of the ultimate static side friction resistance provided by the soil from the required preformed or jetting elevation to the scour elevation.

100-YEAR SCOUR – estimated elevation of scour due to the 100 year storm event.

LONG TERM SCOUR – Estimated elevation of scour used in design for extreme event loading.

PILE INSTALLATION NOTES:

Contractor to verify location of all utilities prior to any pile driving.

Minimum Tip Elevation is required for lateral stability.

When a required jetting elevation is shown, the jet shall be lowered to the elevation and continue to operate at this elevation until the pile driving is completed. If jetting or preforming elevations differ from those shown on the table, the Engineer shall be responsible for determination of the required driving resistance.

No jetting will be allowed without the approval of the Engineer.

The Contractor should not anticipate being allowed to jet piles below the minimum tip elevation.

At each Bent, pile driving is to commence at the center of the Bent and proceed outward.

NOTICE: THE OFFICIAL RECORD OF THIS SHEET IS THE ELECTRONIC FILE SIGNED AND SEALED UNDER RULE 61G15-23.003, F.A.C.

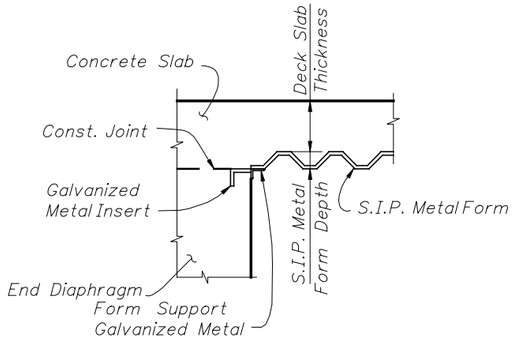
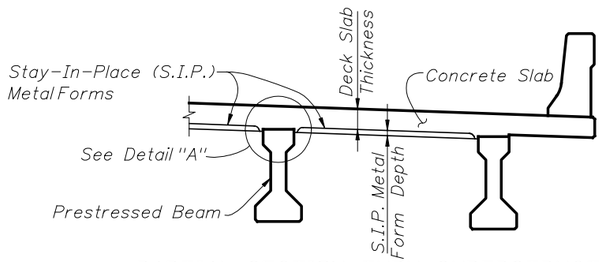
DETAIL "A"

* Note: Electrical grounding to reinforcing steel is prohibited.



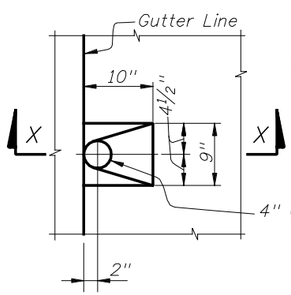
PARTIAL SECTION THRU END OF SPAN



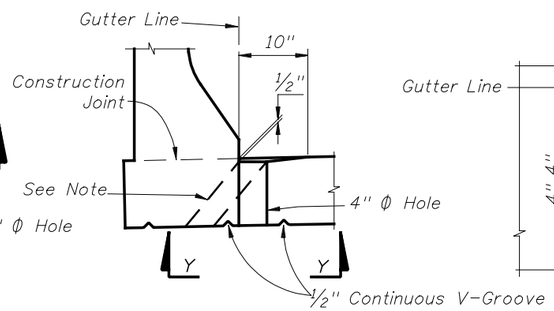
PARTIAL SECTION THRU SUPERSTRUCTURE

STAY-IN-PLACE FORM DETAILS

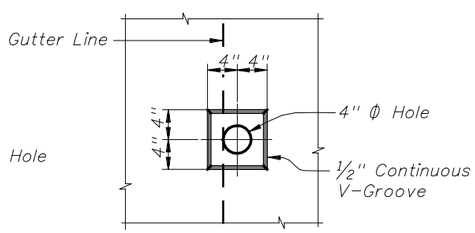
STAY-IN-PLACE METAL FORM NOTES:
1. The Superstructure Concrete Quantities shown do not include the concrete required to fill the stay-in-place metal form flutes.
2. The cost of the stay-in-place metal forms, the concrete required to fill the flutes, the metal form attachments and accessories and all miscelleneous items required to install the forms shall be included in the Contract Unit Price for the Superstructure Concrete.



PLAN



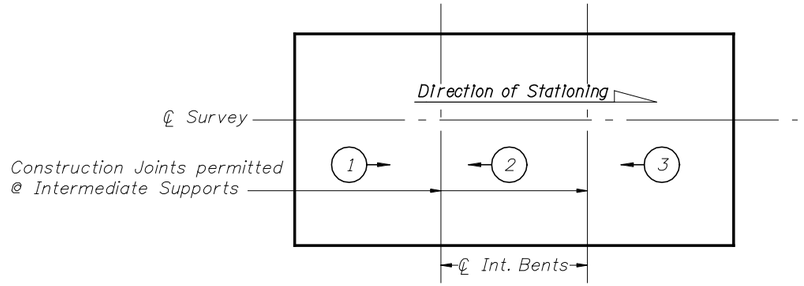
SECTION X-X



VIEW Y-Y

DRAIN DETAILS

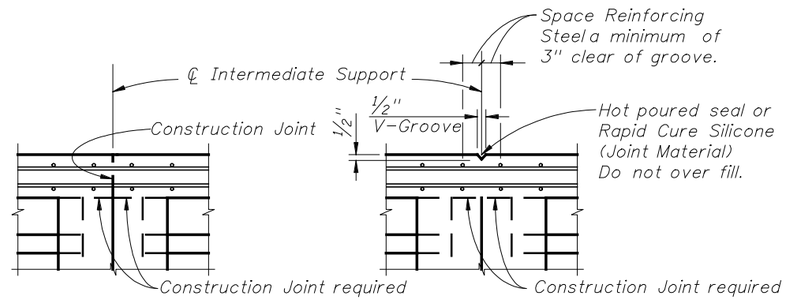
NOTE: 4" Ø Hole need not be plumb, however do not direct drainage onto the girder below.



SLAB POURING SCHEDULE

(X) → Direction and sequence of deck slab pour

SLAB POURING NOTES:
1. Place no unit adjacent to a previously placed unit which is not a minimum of 72 hours old.
2. After placement of the first unit, begin succeeding placements at the end away from and proceed toward the previously placed unit.
3. A revised casting sequence may be submitted for approval. Submit structural analysis and its effect on the Camber Diagram. Revise per Chapter 28 of the Plans Preparation Manual - Volume 1.



DETAIL B (@ Construction Joints)

DETAIL C (@ Continuous Joints)

JOINT DETAILS

NOTES:
1. Use Detail B where a pour terminates at an intermediate support.
2. Use Detail C where slab pours are continuous over intermediate supports.
3. Cost of constructing Detail C shall be included in the deck concrete. The Contractor shall construct either a tooled groove or V-groove placed prior to the concrete obtaining initial set.
5. Rapid Cure Silicone (Joint Material) may be used in lieu of Hot Poured Seal in groove. Groove shall be clean & free of grease & debris before filling the groove.

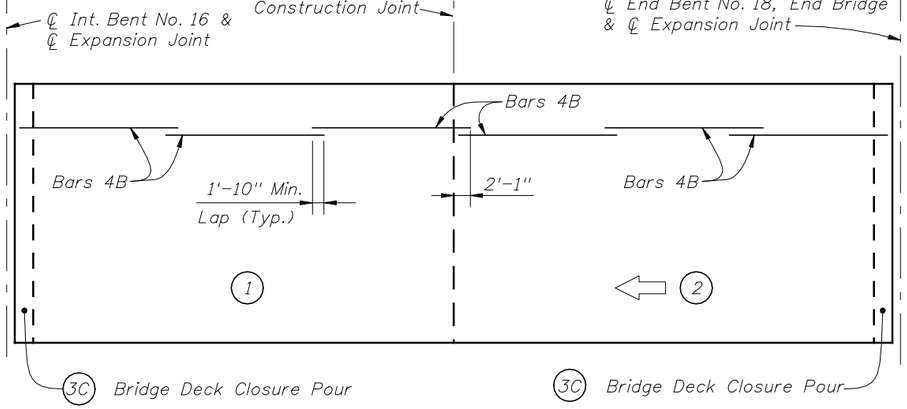
(SPAN NOS. 1 THRU 3 SIMILAR)

LEGEND:

(3) = Pour Number

⇦ = Direction of Pour



SLAB POURING SEQUENCE
(SPAN NOS. 16 & 17 SHOWN)

NOTES:

No slab pour shall be placed adjacent to a previously placed slab pour that is not a minimum of 72 hours old.

After placement of the first slab pour, succeeding placements shall begin at the end away from and proceed toward the previously placed slab pour.

At the Contractor's option, both the slab pouring sequence and direction of pours may be reversed.

Closure Pours (3C) & (4C) shall be made after profiling operations have been completed for the adjoining Units.
